

# CS 171 Design Studio 3 - Peer Feedback

Jaemin Cheun and Ray Kim

Group we worked with: Ben Zauzmer, Jason Mahr, Linda Song

Quality of Feedback: In general, they were very helpful. They were willing to give us helpful comments and suggestions. Because they were familiar with the data we were visualizing and other websites that have similar visualizations, they were able to view our project from the user's perspective.

Feedbacks:

(1) Other sources of rankings?

Because there can be discrepancies between different rankings such as that of Forbes and that of U.S. News, we will update our visualization so that it will give the user the option to choose which ranking they want to work with.

(2) More variables?

As of now, we have two variables for each college: tuition and student population. We will be adding more variables such as amount of financial aid given and acceptance rate of each college.

(3) Selecting multiple colleges at once?

We will make sure to update the visualization so that the user can choose multiple colleges on any of the visualizations (map, table, scatterplot) to compare them.

(4) Options to show various bar charts?

We were not sure what the bar charts will represent, so we will be putting this idea on hold.
